PacifiCorp Transmission

PacifiCorp, a regulated utility based in Portland, Ore., serves 1.8 million customers across 143,000 square miles in six western states. The company comprises three business units that generate and deliver safe, reliable electricity to customers at a reasonable price.

- Pacific Power serves customers in Oregon, Washington and California.
- Rocky Mountain Power serves customers in Utah, Wyoming and Idaho.
- The company owns and operates one of the largest privately held transmission systems in the U.S.
- The company operates a large, diverse portfolio of generating assets to ensure low-cost energy is available for customers.

## RENEWABLE AND NONCARBON RESOURCES\*

- Renewable and other noncarbon resources currently make up 25 percent of PacifiCorp’s owned and contracted generation capacity.
- At year-end 2015, PacifiCorp had 1,030 megawatts of owned wind capacity.
- PacifiCorp derives 1,135 megawatts of owned and contracted generating capacity from its hydroelectric facilities.
- Our most recent integrated resource plan includes power purchase agreements for more than 800 megawatts of wind and solar projects expected to come on-line by the end of 2016.
- To benefit customers, the company is actively part of an energy imbalance market. The real-time market helps optimize the electric grid, lowering costs, enhancing reliability and more effectively integrating renewable resources.

## ELECTRICAL FACILITIES

- The company has 13,949 megawatts of owned and contracted generation capacity.
- The company operates 73 generating facilities across the West, including coal, natural gas, hydroelectric, wind, solar and geothermal facilities.
- PacifiCorp has approximately 64,000 miles of distribution lines and approximately 16,500 miles of transmission lines – more than any other single entity in the West.
- In 2015, approximately 100 miles of new transmission lines were placed in service with the completion of the 345KV line between Sigurd and Red Butte in Utah.

## BLUE SKY RENEWABLE ENERGY

- Pacific Power and Rocky Mountain Power offer customers the opportunity to support even more renewable energy by participating in its nationally acclaimed Blue Sky<sup>SM</sup> renewable energy program. Blue Sky renewable energy is separate from, and in addition to, what the company buys or generates to serve all customers.

*\*All or some of the renewable energy attributes associated with wind, geothermal and qualifying hydro facilities may be used in future years to comply with renewable portfolio standards or other regulatory requirements or sold to third parties in the form of renewable energy credits or other environmental commodities.*
